DISCOVERY SESSION · WED, NOV 18 · 1:00–1:45 PM ET

Detection to documentation

Using a ‘Revision History’ extension to support authentic student writing in the age of AI

The process is the evidence.

Scan to try it, step by step, on your own Google Doc.

briannapack.github.io/Detection-to-documentation

1 Install

Type **revisionhistory.com** in Chrome

2 Read the history

Open a Doc, read the summary bar

3 Watch the replay

See how, and by whom, it was written

4 Apply

Use SHOW, on the back

Brianna M. Pack, MPH, MBA

Sharon K. Titus, PhD, MSN, RN

STEP 4 · APPLY

Make your students SHOW their work

THE SHOW APPROACH

S — Structure the assignment
Set up milestones in one shared Doc, so you can see the writing process. You're an editor, and students submit the link.

H — Hold students accountable
Enforce the requirements, like no pasting, so the process stays visible.

O — Observe and respond
Give feedback on the process at each milestone, so students improve.

W — Weigh the whole picture
Grade the whole process, not just the final product.

H · HOLD ACCOUNTABLE

Pasted text earns a zero

Like "show your work" in math, the process is part of what's graded.

O · OBSERVE AND RESPOND

See a sudden block of text?

Ask the student how they wrote it. A pattern is a reason to talk, not proof.

YOUR TURN

Think of a writing assignment where authenticity has been a concern. How might you redesign it using SHOW?

Evaluate this session
Scan, then tap Evaluate Session.
